

Slow Typer Syndrome

Author: The Brewsome Bois

Problem Statement

Typing fast and accurately is hard and requires practice. People slip up and make common typing errors on emails and work documents. There are even cases where textbooks have misprints.

Who is experiencing the problem?

People that often lack the experience of using phones and other devices such as younger kids and older people. Additionally, people that often mistyped words in important emails and documents.

What is the Problem?

Typing fast gets more done on your computer. Typing fast, however, is difficult. It's always good to practice typing and aim for a better speed.

Where does the problem present itself?

The problem presents itself anytime anyone needs to use a computer for work or even for fun.

Why does it matter?

Everything is going digital in the modern world. To save time in peoples' lives, we decrease the time spent staring at electronic devices, increase productivity and free up more time by typing efficiently and quickly.
